note
UVP was on for this cast!
UVP not on for this cast
thermocline! Halocline! Stratification!
surface water was taken from ships underway seawater flow through positioned @ 6 m down
surf and 10 m have same levels of chl about
SLY8 no particles
SLY6 no particles
SLY4 no particles
SLY2 no particles
revisited DBO3.8 later in the morning after finding a strong chl max earlier.
opportunistic CTD casts in between process stations due to being ahead of schedule
No UVP on DBO3.8 (was asleep)
no particle filters this depth
no particle filters for SLY9.5
no particle filters for SLY8
no particle filter for clines
lots of stuff in the water, reduced filtered volume to 1
KL transect is an extra nutrient and profile line en route to next process station
first signs of returning stratification −− especially in thermocline
DBO3.7 particle filters may not actually be accurate, numbers in data sheet were crossed off.
DBO3.6 − no particle filters
CTD non−cooperative−−bottles for depths above 13 did not fire
chl m
CBW15 no particle filters
bit of thermal graident starting to form around 15 meters, everything else still looks mixed
also revisiting process station as survey station (cast 012)
*very bottom of thermocline
*clines = thermo and pycnoclines
*cline = thermo and pycnoclines and increase in O2
**oringally logged as DBO2.1, when it is actually station DB2.2
**duplicate particle filters, same genetic sample
notes
cluster1

	no particle filter for clines
s, same genetic sample	no particle filters for SLY8
3O2.1, when it is actually station DB2.2	no particle filters for SLY9.5
noclines and increase in O2	no particle filters this depth
cnoclines	No UVP on DBO3.8 (was asleep)
line	opportunistic CTD casts in between process station
tation as survey station (cast 012)	revisited DBO3.8 later in the morning after finding a
tarting to form around 15 meters, everything else still looks mixed	SLY2 no particles
s	SLY4 no particles
	SLY6 no particles
-bottles for depths above 13 did not fire	SLY8 no particles
