

ASVs by Class (3 bloom classes)

Position = proportion of total RA in each filter fraction

ASVs by dominant sample cluster (k = 4)

Each ASV assigned to the cluster with highest mean RA

ASVs with RGB blend + top 20 genera

Red = 0.2 μm , Green = 3 μm , Blue = 20 μm

(a) ASVs by dominant sample cluster (k = 4)

(b) ASVs by Class (3 bloom classes)

(c) ASVs with RGB blend + top 20 genera

ASVs by 3-class objective filter

Occurrence > 10% AND cumulative RA <= 95% (n = 55 ASVs)

(a) ASVs in four clusters

(b) ASVs by Class (3 bloom classes)

(c) Objective-filter ASVs (3 classes)

(A) ASVs in four clusters

Each ASV assigned to the cluster with highest mean RA

(B) ASVs by Class (3 bloom classes)

Position = proportion of total RA in each filter fraction

(A) ASVs in four clusters

Each ASV assigned to the cluster with highest mean RA

(B) ASVs by Class

Position = proportion of total RA in each filter fraction
